

Global total CO₂ emissions (in gigatons)

Source: IPCC, Global Warming of 1.5°C; Global Carbon Project; Climateworks Australia

Remaining carbon budget at 01/01/2021

* At current rate of emissions

The probability of limiting global warming to 1.5°C is approaching zero. Based on information from the IPCC and the Global Carbon Project, this graphic illustrates the pace and scale that emissions would need to drop to make 1.5° or 2°C more likely than not.
